

# BookOS — Build Plan & Workflow

Sarah-powered AI receptionist for hairdressers, barbers, beauty studios & trades

Prepared by Jayson Ocampo, Director of AI Solutions · 17 April 2026 · STATUS: APPROVED

## 1. PRODUCT SUMMARY

BookOS is a stripped-down, SMB-priced version of Directive OS. Sarah answers every call and chat 24/7, qualifies the customer, captures name + service + preferred time + phone + email, then sends the customer a Calendly booking link by SMS so they self-serve the time slot. The owner gets an instant push + email with the lead.

### What it is

- Sarah AI voice receptionist (24/7) — same brain as DOS, salon/trades persona
- Live web chat widget for the business website
- Calendly link sent to every qualified caller via SMS
- Email notification to the owner with full transcript
- Push notification via the BookOS owner app
- Owner dashboard — leads, transcripts, missed-call recovery

### What it is NOT (MVP scope)

- NO end-customer payment at booking — owner subscribes via Stripe; customers pay \$0
- NO direct calendar write (Sarah does NOT create the Calendly event; she sends the link)
- NO listings sync, no VaultRE, no real estate features
- NO multi-language at launch (English only)
- NO branded mobile app per business (premium add-on for v2)

## 2. ARCHITECTURE DECISION

**Brand** BookOS — separate brand from Directive OS

**Domain** bookos.com.au preferred · bookos.directiveos.com.au as fallback

**Backend** Same Replit deployment, same api-server, same Postgres

**Sarah** Same OpenAI Realtime brain, persona switched by agencies.vertical column

**Twilio** Each BookOS client gets their own AU number — same account as DOS

**Frontend** New artifact artifacts/bookos for marketing; dashboard reuses 80% of DOS

3. PRICING TIERS

| Plan                      | Setup   | Monthly  | Per-seat | Voice incl. | Overage    |
|---------------------------|---------|----------|----------|-------------|------------|
| Solo (1 chair / 1 tradie) | \$499   | \$99/mo  | —        | 200 min     | \$20/10min |
| Studio (2–5 staff)        | \$799   | \$149/mo | +\$25/mo | 400 min     | \$20/10min |
| Multi-Location (2+ shops) | \$1,499 | \$249/mo | +\$25/mo | 800 min     | \$20/10min |

No lock-in contracts. Cancel anytime. Setup includes Twilio number, persona tuning, Calendly handoff, dashboard onboarding, and the website chat widget snippet.

4. CUSTOMER CALL WORKFLOW

- 1. Customer calls the salon's BookOS Twilio number
- 2. Twilio routes to the shared api-server voice handler
- 3. Server reads agency by "to" number !' loads salon

persona  
with name,  
services,  
Calendly  
link

- 4. Sarah  
greeted and  
qualified:  
name,  
service,  
stylist  
preference,  
day/time

- 5. Sarah  
confirms  
back: "I'll  
text you our  
online  
calendar —  
pick the slot  
that suits  
you"

- 6.  
Goodbye  
exchange !'  
call ends

- 7. Within  
5s: Twilio  
SMS to  
customer  
with  
Calendly  
link · Email  
to owner  
with  
transcript ·  
Push to  
owner  
mobile ·  
Lead +  
transcript  
saved to DB

## 5. BUILD PHASES & AI-MINUTE ESTIMATES

"AI minutes" = wall-clock time the agent spends building, testing and verifying. Calendar time is longer due to your reviews and Stripe/Twilio account setup.

**Phase 0 Decisions & domain (you)** ~1 day calendar

Buy bookos.com.au · create Stripe products · Resend domain DNS

**Phase 1 Database & vertical routing** "H 25 min

Add vertical, calendlyUrl, bookosTier columns. Drizzle schema + db:push.

**Phase 2 Sarah salon/trades persona** "H 30 min

New persona builders selected by agencies.vertical.

**Phase 3 Calendly SMS handoff** "H 25 min

sendCalendlyLinkSms() wired into onCallEnd().

**Phase 4 BookOS marketing site** "H 90 min

New artifact artifacts/bookos · home, pricing, sign-up, demo, login.

**Phase 5 Owner dashboard (BookOS)** "H 70 min

New /bookos/dashboard reusing DOS components with feature flags.

**Phase 6 Mobile push notifications** "H 30 min

Reuse Command Bridge with BookOS branding flavour.

**Phase 7 Onboarding & provisioning** "H 25 min

Admin "Create BookOS Client" — auto-buy Twilio AU number, insert agency.

**Phase 8 Pilot client** ~1 week calendar

Onboard 1 friendly hairdresser at \$0 month 1 in exchange for testimonial.

**Phase 9 Sales materials & launch** "H 60 min

BookOS one-pager, brochure, business card, signature, outreach playbook.

---

### Total build estimate (Phases 1–7 + 9)

"H 355 AI minutes "H 6 hours of focused agent work — from zero to "I can sell this".

### Two-sprint delivery option

- Sprint A — Launchable MVP (Phases 1–4 + 7): "H 195 AI minutes (~3.5 hrs).
- Sprint B — Polished v1 (Phases 5, 6, 9): "H 160 AI minutes (~2.5 hrs).

## 6. RISKS & MITIGATIONS

**Risk:** Salon owners are price-sensitive — \$99/mo could feel high

**Fix:** Lead with ROI: "One missed booking = \$80+. We answer 24/7." Free first month for testimonial.

**Risk:** Calendly link click-through could be low

**Fix:** Track via UTM, send follow-up SMS after 6h if no booking detected.

**Risk:** Twilio AU number costs ~\$1.50/mo per number

**Fix:** Built into pricing; Solo still has ~\$95+ gross margin/mo.

**Risk:** Sarah's voice may sound too corporate for a chill barbershop

**Fix:** Per-vertical persona tuning — friendlier tone, casual greeting.

**Risk:** Customer thinks they're booked (they're not until they click the link)

**Fix:** Sarah explicitly says "you're not booked until you pick a slot in the text I just sent".

**Risk:** Cannibalises future DOS energy

**Fix:** Same codebase, same Sarah, same database — no fork. The work scales DOS too.
